Kiemle-Hankins and Birclar Announce Website Update

July 15, 2010
Toledo, Ohio

The Kiemle-Hankins Company (“Kiemle-Hankins”) and Birclar Electric & Electronics (“Birclar”) today jointly announced the release of a significant update to their websites. “The decision to invest in upgraded websites was supported at all levels of our company,” stated Tim Martindale, the President of Kiemle-Hankins and the Chairman of Birclar. “The entire team was excited to offer the world a more extensive view of our services, facilities and capabilities.” According to Martindale, “We deliver repair and maintenance solutions that are unrivaled in our markets, and the websites tell our story in ways that will help customers make informed decisions.”

The refreshed websites are an easy to navigate resource and offer many insights into Kiemle-Hankins and Birclar, which together form one of the largest industrial repair organizations serving the Michigan, Ohio, Indiana, Illinois and Kentucky markets. “In an effort to distinguish ourselves from less sophisticated repair facilities, we have created websites that back up our claim to be the premier provider of maintenance services in this region,” stated Martindale.

Kiemle-Hankins, founded in 1928, specializes in servicing critical substations, circuit breakers, motors, dynamometers, pumps and other rotating apparatus. Birclar, a subsidiary of Kiemle-Hankins since 1998, provides the same suite of repair, maintenance and testing services to its customers. In addition to five fully equipped repair facilities in Ohio, Michigan and Indiana, Kiemle-Hankins and Birclar provide a complete range of field service and preventive maintenance capabilities.
